

Access Control

Protecting Colorado businesses since 1901.

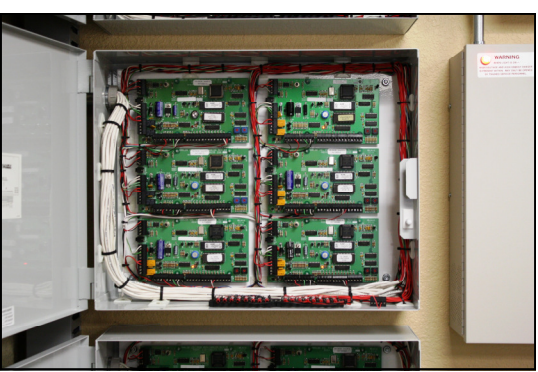

Mathias Lock and Key knows the importance of being able to control access to your company's assets.

Access Control is an advanced security technique used to centrally manage employee entrances and exits at specific openings and times, along with video, badge access, elevator controls, and parking garage controls. We will customize and install a solution to ensure the highest levels of security and cost-effectiveness.

Our expert technicians provide comprehensive training to our customers. A customized access control system will ensure that you, your customers, employees and physical assets will be protected at all time.

Mathias' Access Control solutions achieve increased security and improved performance by controlling the entry and exit of all personnel and vehicles and monitoring activity throughout your facilities in real-time.

Our systems detects and reports abnormal events like intrusion attempts, forced entry, attempts to use restricted doors, and integrated systems such as fire, tamper or other hazard alarms. It allows system operators to update user profiles and schedule events from a central location, eliminating the need to go to the access point (door). Further, every use of every access point is recorded through the system's audit feature.

DOES YOUR WIRING LOOK LIKE THIS?

An organized panel is easier to service and more efficient.
